

**NOISE AND
VIBRATION
SOLUTIONS FOR
HVAC**

SOLVING VIBRATION PROBLEMS ON HVAC SINCE 1969

Factory 1

Factory 2

Since 1969 **AMC-MECANOCAUCHO** has pioneered the manufacture and design of antivibration mountings for the reduction of vibrations in multiple applications.

With this purpose, **AMC-MECANOCAUCHO** has developed a width range of products focused in the **HVAC** equipment isolation. This supports are manufactured using rubber, springs or a microcelular polyurethane material specially conceived for vibration isolation called **Sylomer®**.

AMC MECANOCAUCHO® PROCESS

All machinery, which by virtue of its design has reciprocating or rotating parts, creates vibration to some degree through the imbalance of the moving parts.

This vibration produced by a machine leads to different problems such as a reduction in the machine's useful life through part wear plus the transmission of this vibration to other non-insulated adjacent structures, giving rise to problems of noise and vibration transmission. In this sense, **AMC MECANOCAUCHO®** has been developing for over 40 years different ranges of anti-vibration mounts that can solve problems like the ones described above.

Taking into account some data of the machine such as weight, mount positions, type of machine, Center of Gravity, frequency of excitation, etc., **AMC MECANOCAUCHO®** does vibration calculations in order to suggest the most appropriate anti-vibration mount solution for each case. The proposed solutions are commonly taken using following types of anti-vibration mounts: **AMC BRB, AMC BSB and AMC DRD mounts** (Rubber-Metal solution), **AMC Vibrabsorber mounts** (spring mounts solution), **Sylomer® and FZ+Sylomer® mounts**.

QUALITY CONTROL

AMC-MECANOCAUCHO® is a ISO 9001 certified company by DET NORSKE VERITAS DNV. **AMC-MECANOCAUCHO®** is officially approved by NATO under the id number **NCAGE 0230B**- compliant supplier.

Rubber curing properties are controlled by **Rheometrical** instruments as well as extensometers, dynamometers and durometers.

Elastical properties are measured with several axial and radial dynamometers as well as with a servohydraulic dynamic test bench from **Instron-Schenck®**.

Marine type approval

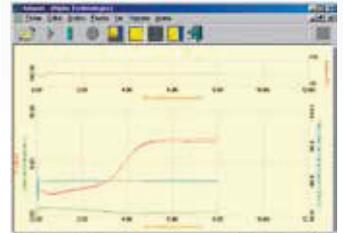

Adhesion test

Extensometer

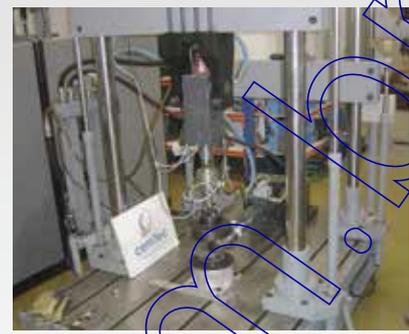

Rheometer

FATIGUE AND ENDURANCE TESTS

AMC-MECANOCAUCHO® has certificates of external laboratories that have tested gearbox mountings to know the alteration of the stiffness properties during a representative life cycle of a wind turbine.

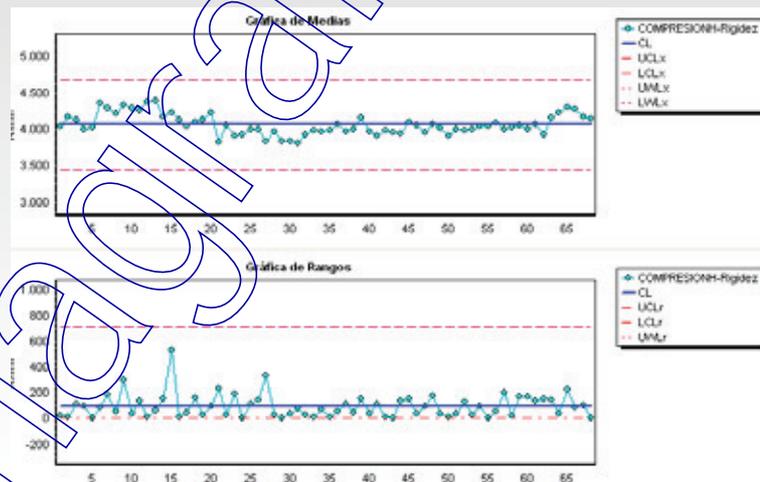

AMC-MECANOCAUCHO® uses Instron Schenck® servohydraulic dynamic test benches to measure stiffness variation for generator mountings during a representative life cycle of a wind turbine.

PROCESS CONTROL

AMC-MECANOCAUCHO® realizes a process control of the mountings made manufactured. The % of sampling is according to customer requirement.

On the graph beneath, stiffness values of a generator mount is shown while production is taking place.

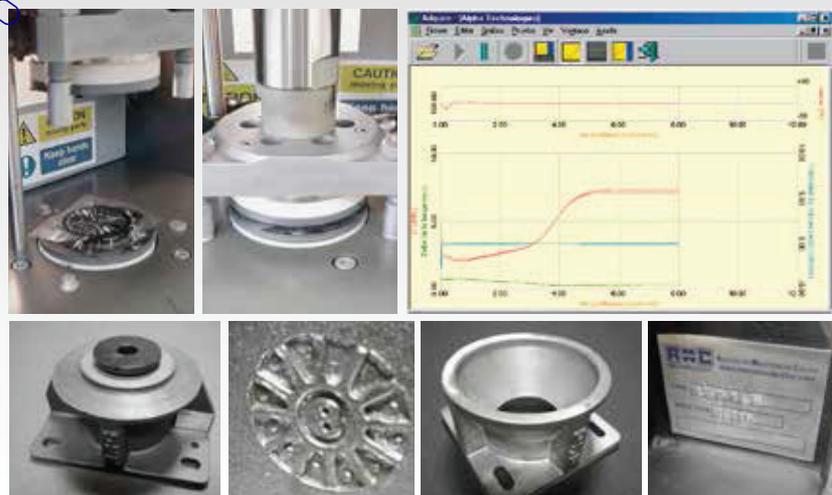

TRACEABILITY

AMC-MECANOCAUCHO® can keep track of the finished goods for those customers that require traceability on their products.

Rheometrical tests are linked to each batch of production. This allows to verify the vulcanization properties of the rubber mix used.

Foundry castings can incorporate the date of manufacturing.

Finished goods can incorporate a serial number. This allows us to check stiffness values of the mounts as well as other complementary information.

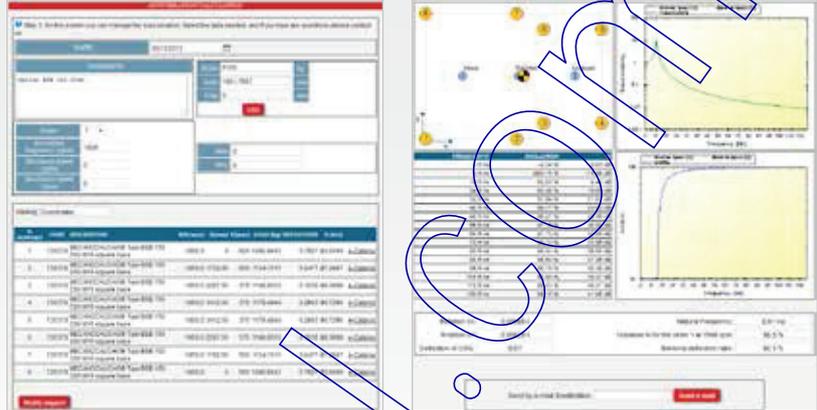

AMC ENGINEERING SERVICES

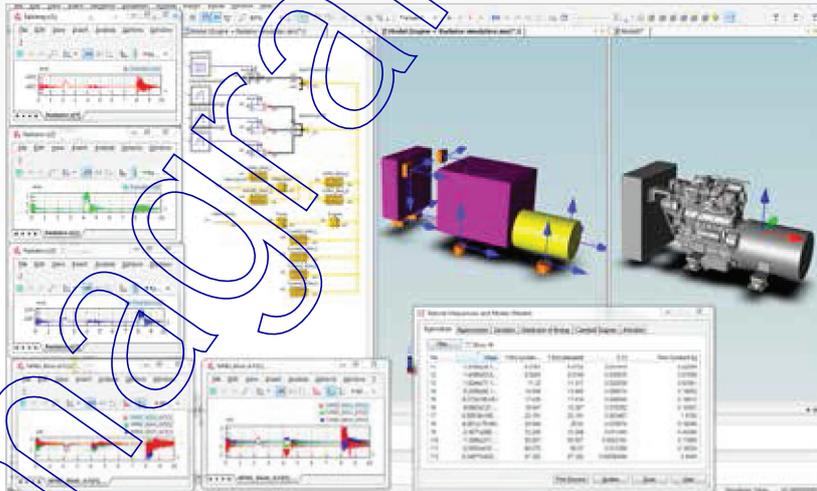

CALCULATION

AMC MECANOCAUCHO® calculates anti-vibration solutions by taking into account data such as weight, mount positions, type of machine, C of G, frequency of excitation, etc...

One degree of freedom calculation

Anti-vibration calculation with more than one degree of freedom.

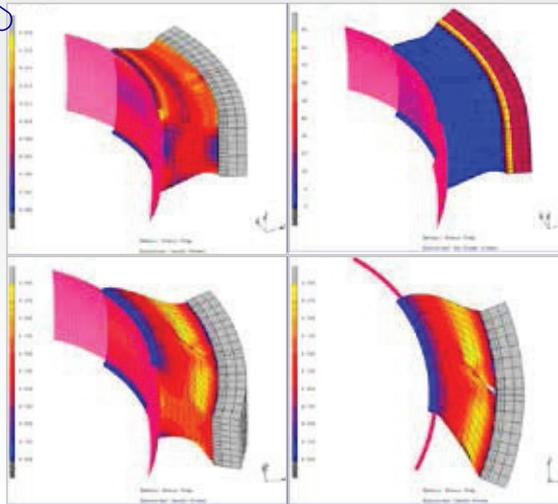

DESIGN

After studying client specific needs for the application and the isolation performance required.

AMC MECANOCAUCHO® can produce a new design if standard products are not suitable.

Analysis of stress by non-linear FEM

2

Modeling of products in 3D

AMC ENGINEERING SERVICES

TEST AND DYNAMIC CHARACTERISATION

AMC MECANOCAUCHO® can offer customers a wealth of experience and know how in measuring noise and vibration to effect optimum solutions to those problems.

4

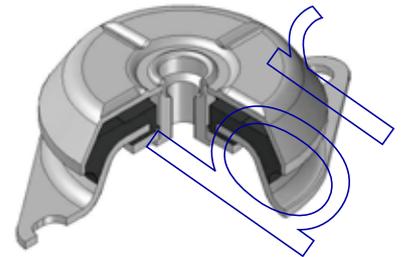

MEASUREMENTS

AMC MECANOCAUCHO® provides its customers with all its experience and know-how in measuring vibrations and noise in the field so as to reduce machine-produced emissions of noise and vibrations.

AMC MECANOCAUCHO RANGE OF PRODUCTS FOR HVAC EQUIPMENTS

These mounts work the rubber in shear and compression. Thanks also to their section that produce large deflections, these BRB, BSB and DRD mounts achieve low natural frequencies and excellent vibration isolation values.

Natural frequency: 5-11 Hz

BRB

TYPE	AMC	Hardness	Hardness	Hardness	Hardness
		40 Sh	50 Sh	60 Sh	70 Sh
BRB 50	Max. Load (Kg.)	20	40	50	80

FZ+ by getzner **sylomer®** MOUNTS

The AMC-MECANOCAUCHO® FZ mounts are composed by two metal parts surrounded by a high resiliency Sylomer® polyurethane compound that offers a high isolation capacity with a small static deformation in all MEDIUM-HIGH frequency range.

They have also an interlocking metal component that provides a fail-safe protection. The Sylomer® polyurethane compound is oil resistant and the temperature range of the FZ mounts is -30°C +70°C.

Natural frequency: 7-14 Hz

VIBRABSORBER + ^{by getzner} **sylomer**[®]

The main characteristic of these mounts is their own capacity to isolate very low frequencies.

VSR+ ^{by getzner} **sylomer**[®] MOUNTS **Natural frequency: 2-5 Hz**

The mounts are manufactured using steel springs that can provide very high deflections up to 50 mm. The base plate is glued to a 12,5 mm Sylomer[®] pad in order to avoid sliding and improve the isolation of the element, mainly at mid-high vibration frequencies that could be transmitted by the spring coil.

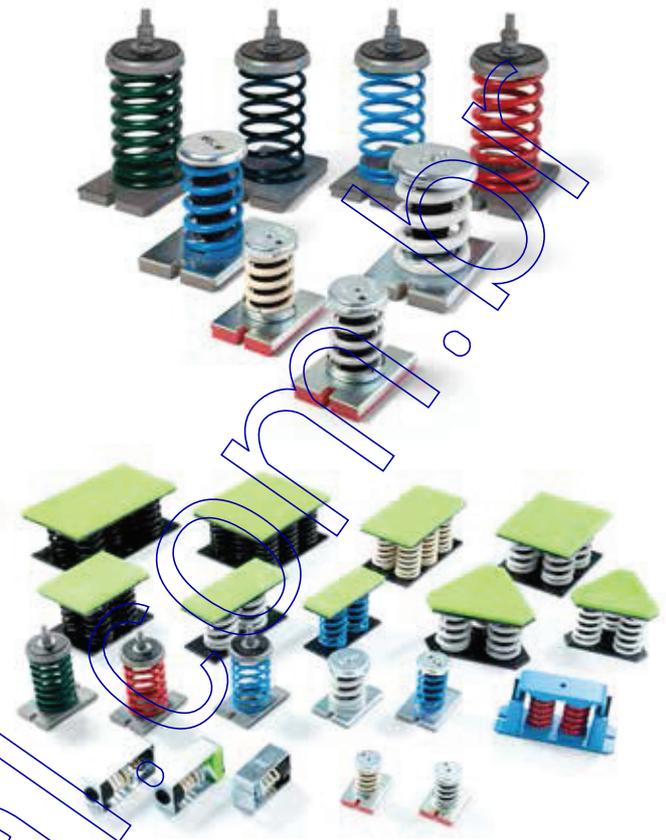

The different maximum load capacities of the mounts are identified by different spring colors. These springs are coated with an epoxy paint that provides excellent corrosion properties.

APPLICATIONS

This mounts are specially interesting for applications where high isolation is demanded. The steel spring combined with the Sylomer[®] pad, provide an excelent isolation for low, medium and high frequencies. Specially interesting for rotating machinery in buildings like air-conditioning, fans, ventilators, compressors, pumps, generating sets etc.

ANTISEISMIC SPRING MOUNTS

These spring mounts incorporate an ANTISEISMIC device to protect the spring from earthquakes.

SIMPLE MOUNTS FOR AIR CONDITIONING INTERNAL COMPONENTS:

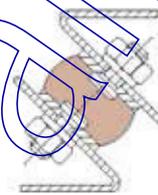

MECANOCAUCHO BOBBINS

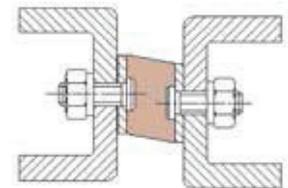

The AMC Mecanocaucho® bobbins are particularly suitable for installation on small motor-pumps, motor-ventilators, driers, sieves, compactors, washing machines, electrical motors, on-board control panels, measuring apparatuses, control cabinets, microphones, fluorescent tubes, etc.

Compression

Compression-shear

Shear

RECOMMENDATIONS FOR THE CYLINDRICAL MOUNTS

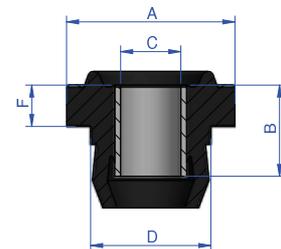

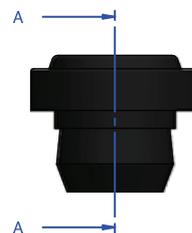

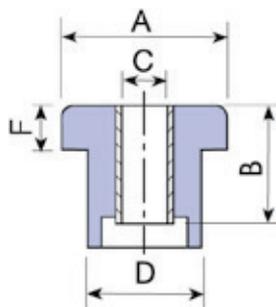

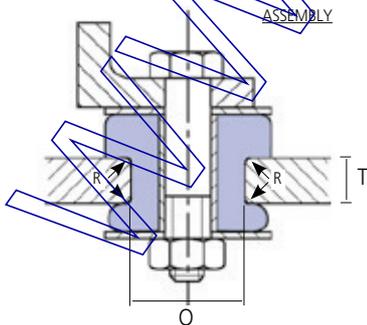

The cylindrical mounts should never work at traction. They should be used on a compression basis. To obtain greater deflection, use them at shear or shear /compression, although the maximum loads indicated in our catalogue for shear use should never be exceeded.

This applies to our bobbins, diablo, trapezoidal or annular mounts.

AMC SNUBBERS FOR SEISMIC APPLICATIONS

These type of mounts are designed for use in locations subject to earthquakes or other external forces which could displace equipments. These two models are intended to limit lateral and vertical machine movements.

AMC SNUBBER + CB

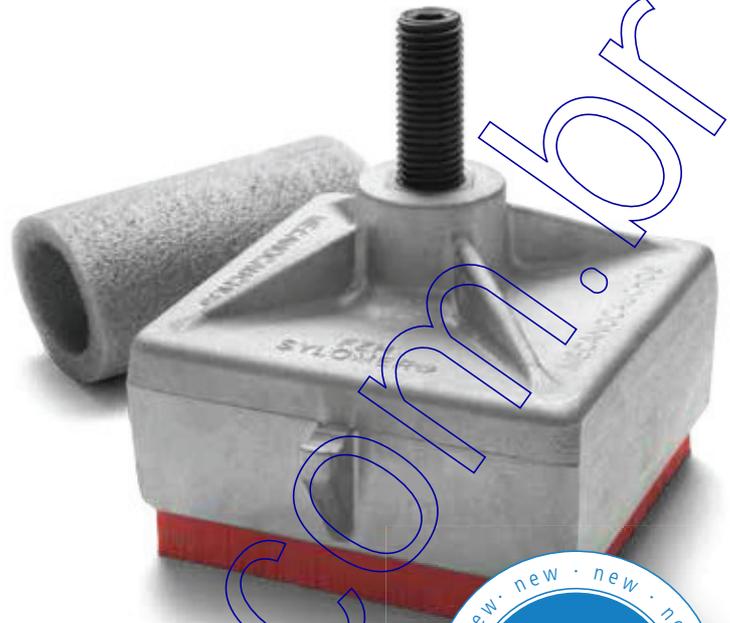

AMC SNUBBER + by oetzner **sylomer**

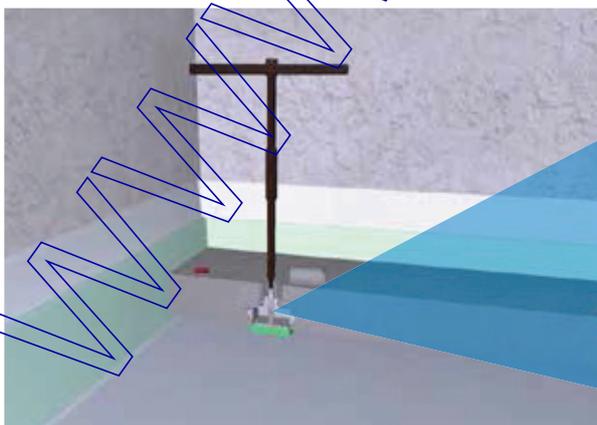

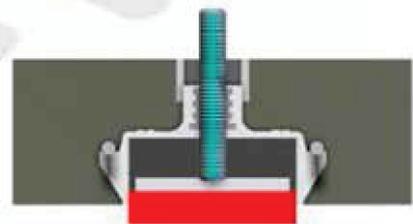

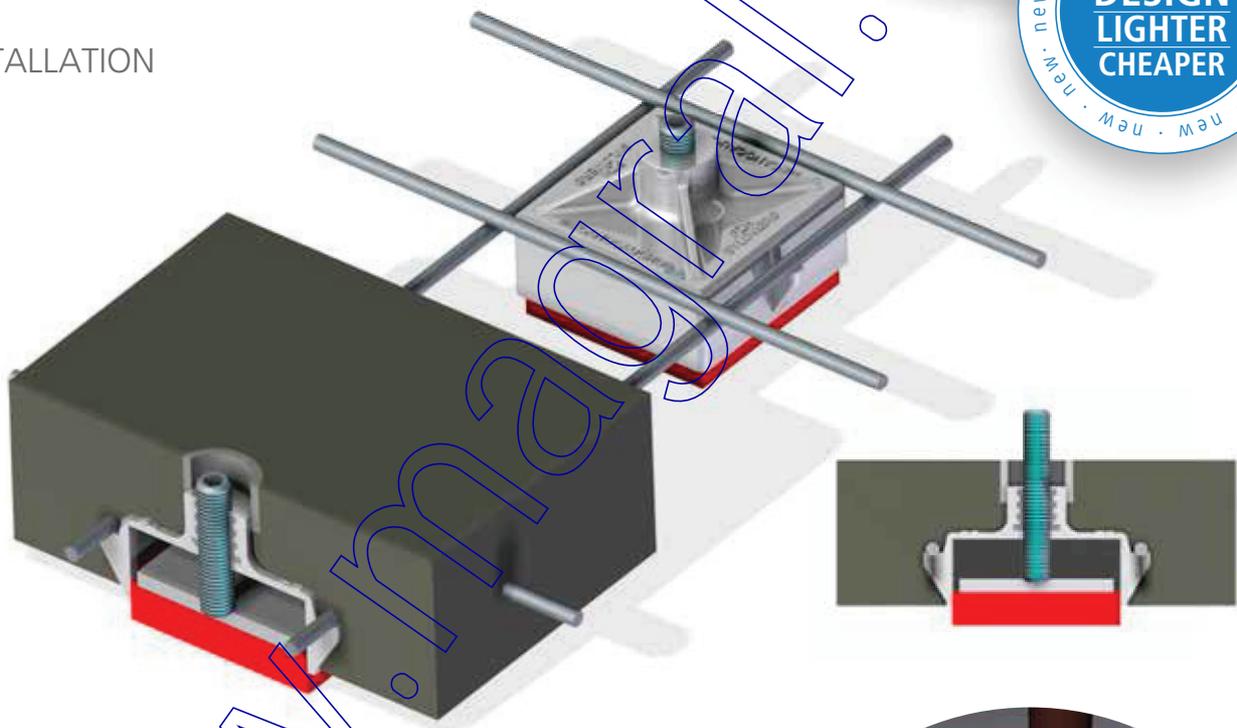

FLOOR MOUNTS FZH + **sylomer**[®]

The goal of the system is to avoid the structure borne noise installing elastical mounts that are embedded in the concrete floating floor. The process of elevation is done once the concrete is dry. The AMC-MECANOCAUCHO[®] type FZH mounts incorporate a polyurethane elastomer called Sylomer[®]. This material offers optimal elastic and mechanical properties for the application.

The AMC-MECANOCAUCHO[®] type FZH mounts can be manufactured in different densities of Sylomer to match the natural frequency needed on the application. The process of leveling is simple and effective. The density of mount per m² is 1.12 and the distance between the mounts is 0,9m.

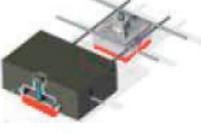

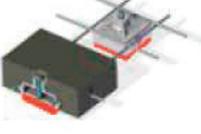

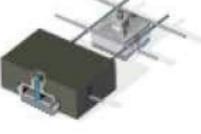

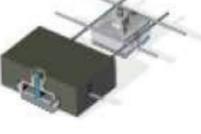

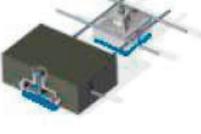

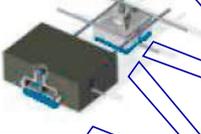

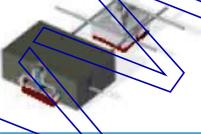

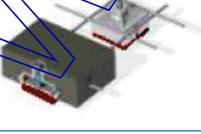

INSTALLATION

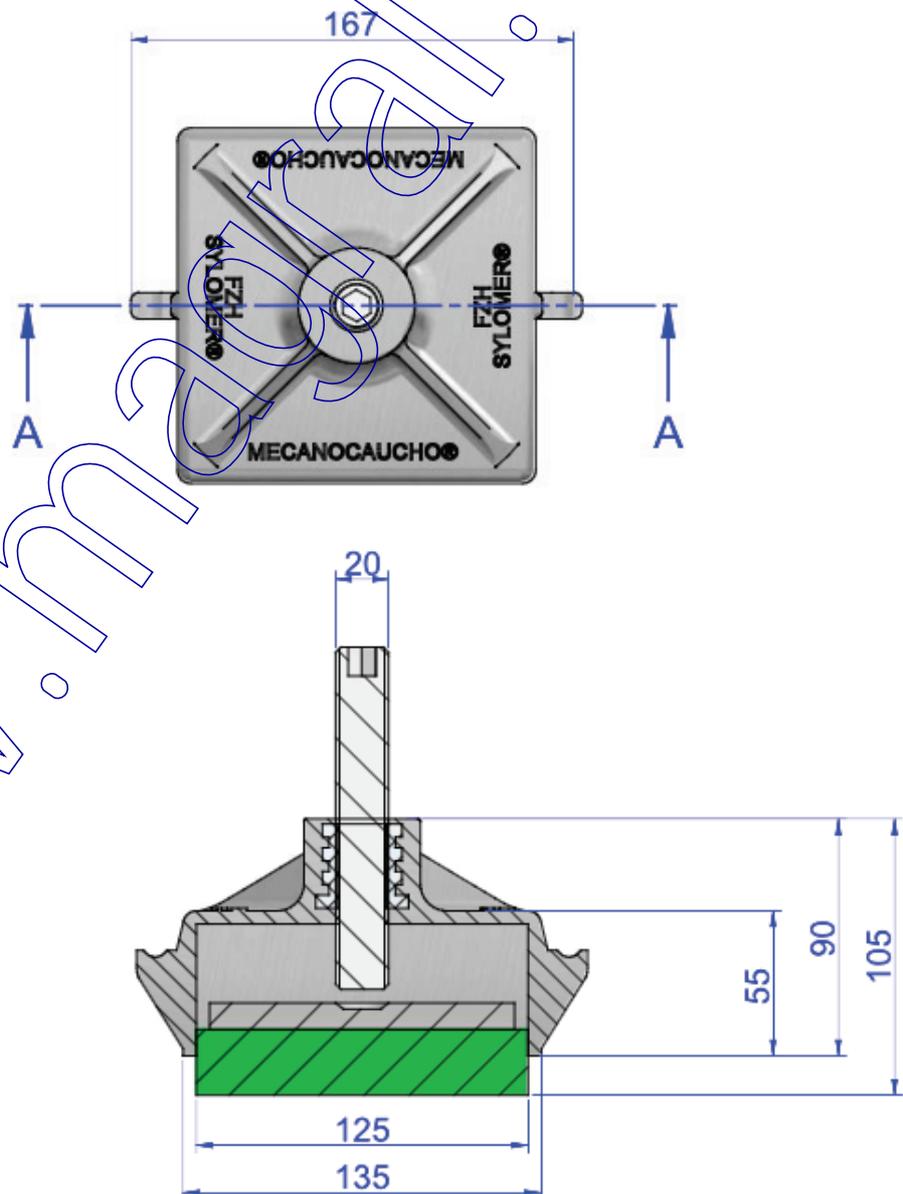

SYLOMER® TYPES

TYPE	SUMMARY	MAX. LOAD Kg.	FREQ. MAX. LOAD (Hz)	CODE
	FZH-33-25 Soporte diseñado para su colocación en suelos flotantes.	140	11	176511
	FZH-33-37 Soporte diseñado para su colocación en suelos flotantes.	140	8,6	176512
	FZH-39-25 Soporte diseñado para su colocación en suelos flotantes.	240	11,1	176513
	FZH-39-37 Soporte diseñado para su colocación en suelos flotantes.	240	8,5	176514
	FZH-45-25 Soporte diseñado para su colocación en suelos flotantes.	490	10,4	176515
	FZH-45-37 Soporte diseñado para su colocación en suelos flotantes.	490	8,1	176516
	FZH-51-25 Soporte diseñado para su colocación en suelos flotantes.	800	11,8	176517
	FZH-51-37 Soporte diseñado para su colocación en suelos flotantes.	800	9,1	176518
	FZH-57-25 Soporte diseñado para su colocación en suelos flotantes.	1260	10,2	176519
	FZH-57-37 Soporte diseñado para su colocación en suelos flotantes.	1260	7,3	176520

ADVANTAGES

- **LOW-LEVEL**, optimum efficiency damped screeds without much height is achieved. Given that the available height is severely limited in many cases, the entire available height becomes concrete slab system and adding mass to lower the natural frequency getting.
- **High insulation**, anti-vibration characteristics thanks to the Sylomer and used in tacos, very low natural frequencies that provide optimum insulation are achieved.
- **Quick installation** without placing board or joints between boards.
- **Economy**, save assembly time, we do not need boards or tacos.
- **Safety**, avoid the appearance of acoustic bridges, as when lifting the slab we are 100% sure that there has been no error in making the slab.
- **Easy and simple assembly**, it does not take a specialist to perform this ground.

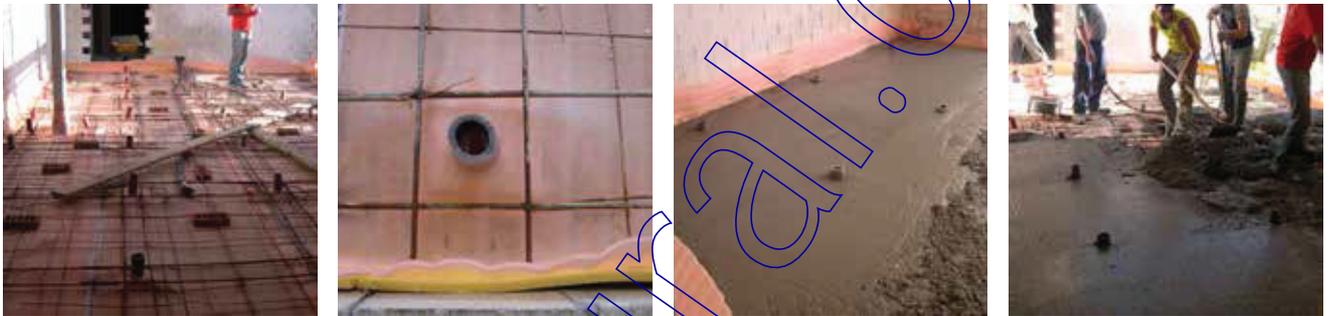

DRAWINGS

INSTALLATION STEPS

Conditioning the premise and installation of the mounts.

Installation of reinforced concrete.

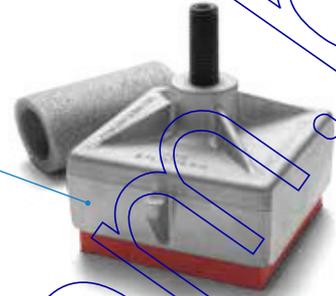

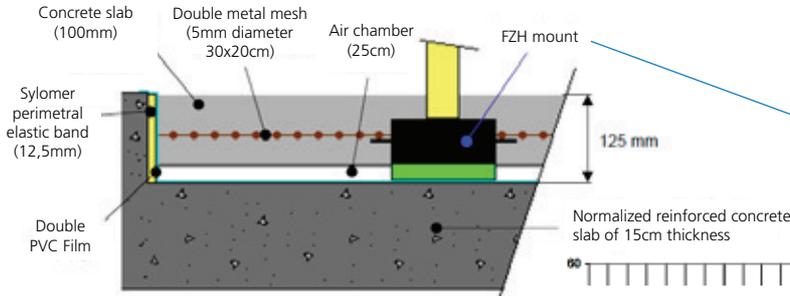

Levelling.

Height adjustment.

COMPARATIVE TESTS AT THE LABEIN TECHNOLOGY CENTRE

Reduction of impact noise on normalized slab according to UNE en ISO 140-8:1998

Weighted gain according to UNE-EN ISO 717-2:1997

$\Delta L_w (C_{1,0})$: 34 (-11) dB

These results rely on the realized tests under an artificial source under Laboratory conditions (engineering method)
* $L_n \leq$ indicated value and $\Delta L \geq$ indicated value (measurement limits)

Laboratory measurements

Test specimen: Floating reinforced concrete slab of 100 mm. thickness, elevated at 25 mm with a system of antivibration mounts as described on the above picture.

Employed supporting slab: Reinforced concrete slab of 15cm thickness, tested in 26/06/09 ($L_n, 0$)

Volume of the receiving room: 64.7 m³

Volume of the source room: 53.6m³

Surface of the test specimen: 13.86 m² (3.3x4.2m)

Estimated specific mass: 250 Kg / m²

Chamber temperature: 17.3 C°

Chamber Hygrometry: 77%

Airborne insulation according to UNE EN ISO 140-16:2007

Laboratory measurements according to UNE ISO 140-3:1995

Test specimen: Floating reinforced concrete slab of 100 mm thickness, elevated at 25 mm with a system of antivibration mounts as described on the above picture.

Employed supporting slab: Reinforced concrete slab of 15cm thickness, tested in 26/06/09 (R_{WITHOUT})

Volume of the receiving room: 64.7m³

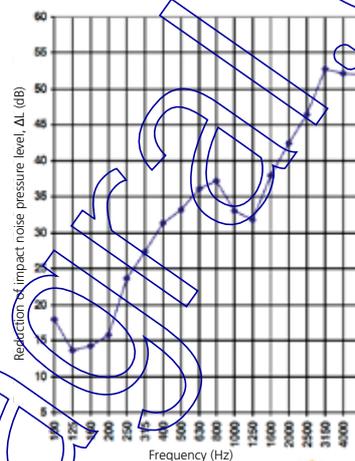

Volume of the source room: 53.6m³

Surface of the test specimen: 13.86m² (3.3x4.2m)

Estimated specific mass: 250Kg/m²

Chamber temperature: 17.3 C°

Chamber Hygrometry: 77%

f (Hz)	L_n (dB)	$L_{n,0}$ (dB)	ΔL (dB)
